

- **Business Problem**

The project mainly deals with booking and cancellations of uber rides in specific to states and its status as complete or incomplete in locations and payment methods that are used for rides.

Cost management is main issue that is to be considered for the routes that passengers are booking for rides. Computing cost is highly expensive due to high infrastructure.

Long trip with high cost involve customer dissatisfaction. The best solution for Long trip is to select the best route.

With dynamic pricing customer satisfaction can achieved easily.

Incomplete rides can be for several reasons. It may occur due to vehicle breakdown or on customer demand. But incomplete ride with reason of vehicle breakdown is going to bring customer dissatisfaction.

Driver can cancel the ride due to several other reasons like personal or car related issues or it can be customer related issues.

Customer can cancel the rides and customer cancellation count should considered as an important factor for the business. The reason for customer cancellation should be collected and if it is dissatisfaction from customer side then that factor should be considered as top priority and it should be reduced.

- **Background/History:**

The uber rides are very passenger friendly rides and we can use the uber app to easily book the rides at all time and we can ride safely and book the rides in timely manner.

The rates of rides are very user friendly and we have several options to choose among the rides and also pooling idea is very innovative. We can book the ride in uber app where we stand and it will also tell the availability of drivers who drive by our location and at the cost listed and we can also choose the ride according to our budget limit and the prices listed.

- **Data Explanation (Data Prep/Data Dictionary/etc.)**

Data is taken from Kaggle

The uber data contains the information like booking details, cancellation details, price and paying method, pick and drop location.

Following fields are included in the uber data set:

1. Date
2. Time

14. Driver Cancellation Reason
15. Incomplete Rides
16. Incomplete Rides Reason
17. Booking Value Ride Distance
18. Driver Ratings
19. Customer Rating
20. Payment Method

• Methods

Data cleaning

Finding the High rated drivers

Finding the lowest rated drivers for the training

Finding the cancellation rates to reduce to an extend.

To increase the booking values of the rides the availability of drivers and traffic should be considered

• Analysis

Uber business connecting the drivers and passengers and their drives in an efficient manner. Massive business idea is implemented here and it made the drives very easy and affordable to reach out to the places in a very pleasant way.

• Conclusion

Concluding here by giving a summary of uber overall it is an excellent idea and it is giving us the in-depth details of the ride along with the booking id, bookingstatus, customer, pickup location, drop location etc.

• Assumptions

Uber business model provides the drivers specific model that we can choose among the drivers according to the reachable distance and also the price and the option we select from the vehicle type ebike, auto, Go Mini, UberXL according to the passenger needs.

• Limitations

The incomplete rides can happen due to several reasons and maximum it is happening for vehicle breakdown. It makes the customer dissatisfied. That can be avoided to an extend.

• Challenges

Drivers income is not an constant factor where it depends upon the rides, each and everyday it may vary and if sudden increase in price may affect the drivers with less rides. The pricing and the frequency of the rides are the important factors that is to be considered for the salaries of drivers in uber

• Future Uses/Additional Applications

Future Use:

The Uber in future is aiming for electric vehicles for the drivers that makes the driving in supportive way.

Additional Applications

The uber app allows us to pay for the drivers without the cash and the payment method can be in other formats like UPI, Debit card, Uber Wallet or by cash.

- **Recommendations**

Try to reduce the cancellation of rides by considering the factors like incomplete rides that can improve the Driver's rating. The average Drivers ratings is 4.25 and if we consider the above factors of cancellations, the ratings can be still be improved. The lowest rating driver should be given training and suggestions to improve the rating.

- **Implementation Plan**

Finding the cancellation rate, finding the lowest and high rated drivers, getting booking value among the rides, Rides Distance Distribution are implemented.

- **Ethical Assessment**

The ethical assessment of the data for the uber rides gives us the clear understanding of Booking value, booking status, cancellation reason and the cancellation rates and ratings of drivers.
